

## Brain hats

Your brain is the most complex structure in the known universe, responsible for everything you think, feel, say and do. Different parts of the brain have different tasks, such as helping us to understand what we can see, moving different parts of our body and understanding emotions in others.

Make a brain hat to discover all the amazing things your brain can do!

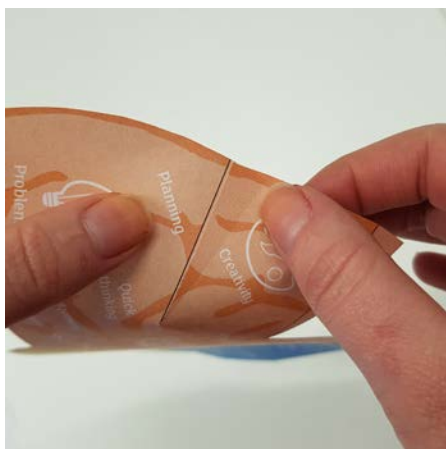

There are different versions of the hat, ones ready to make and others that you can colour in yourself.

### You will need:

- Copies of the pattern printed out.
- Scissors.
- Sticking tape or glue.

### Instructions:

1. Cut out both sides of the hat – don't cut off the tabs!
2. Cut along the dotted 'V' lines where shown.
3. Pull the flaps over so the edge meets the solid line, and tape or glue so it holds together. Do this for all the flaps until each half has taken on a rounded shape.

- To put the two halves together, turn them over and glue the tabs on the right side to the inside of the left side. Start at one end and work your way along the join until all tabs have been taped to the other side. The first and last sections don't have tabs, so you can add tape here to join the two sides together and reinforce these joins with tape on the outside.
